

Communication Solutions for Financial Markets

November 2014

“In comitFS we found a partner who were able to deliver a solution within critical timeframes, in a manner that met the requirements of the initial request brief, whilst offering the flexibility to be enhanced as new clients with differing technology and compliance requirements adopted the service.”

comitFS is the independent and vendor-neutral integrated communication solution provider to the financial markets: uniquely bringing together all aspects of Services, Products, Support and a global Partner program into a comprehensive full-service offering.

We are dedicated to advising, developing and servicing the financial industry’s communication channels. Our Communication Applications Server (CAS) equips customers with the best multi-channel solution mix across voice, IM and video: increasing the value of integration and collaboration.

comitFS enables customers to maximise the value of cumbersome legacy infrastructure, increase collaboration across existing multi-vendor solutions, and transition towards the integrated communication technology of the future.

SERVICES

The comitFS Professional Services team enables financial institutions to 'go to the whiteboard once' when designing, developing and deploying communication solutions across the enterprise. comitFS leverages an unrivalled level of expertise across all vendor platforms to ensure the delivery of seamless, collaborative and scalable communication technology, from tightly integrated single-source infrastructures to complex mixed architectures.

The team's total understanding of the trade workflow enables comitFS to future-proof financial communication technology against market developments and customers' changing business needs.

PRODUCTS

The comitFS CAS suite provisions innovative, effective and compliant multi-channel collaboration capabilities to financial institutions. Built upon an open-standard communication protocol, the CAS suite seamlessly integrates with legacy solutions to maximise the value of firms' existing communication technology, while adding new capabilities such as Voice Messaging.

Proven across both tactical and strategic deployment models, the CAS suite can be combined with the full range of third-party solution innovations to equip firms with reliable, flexible and responsive answers to the demands of today's trading paradigm.

SUPPORT

comitFS provides a wide range of global maintenance, support, transition and monitoring services, dramatically reducing the cost and time required to support clients' voice, IM and video capabilities. This enables firms to maximise existing infrastructure and maintain the status quo, while gaining useful insight into how tighter integration and new innovations can enhance their communication technology.

From maintaining customer' communication technology, to supporting end-of-life third party solutions, comitFS offers a global support model that is tailored to meet firms' changing business needs within specific budget and time limitations.

PARTNERS

comitFS is an active partner to the financial industry's leading Tier One vendors, who engage our products, solutions and expertise to amplify and develop their offerings, while bringing the CAS suite to market through their own channel programs.

comitFS actively develops relationships with innovative solution providers, offering firms an accelerated route to market and increased market-share as part of our partner network.
